Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 3 and 8-13, drawn to a method of decreasing NPY gene expression in an individual, classified in class 514, subclass 44.
- II. Claims 4 and 14, drawn to a method for decreasing NPY overproduction via an NPY receptor antagonist, classified in class 514, subclass 1.
- III. Claims 5, 6, 15 and 16, drawn to a method decreasing NPY overproduction in an individual via a NPY antibody, classified in class 424130.1, subclass 130.1.

Claims 1 and 2 link(s) inventions I-III. The restriction requirement between the linked inventions is subject to the nonallowance of the linking claim(s), claims 1 and 2. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is

Art Unit: 1635

withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Claim 7 is generic to Groups III and will be examined in view of the limitations of the elected invention.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are all unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are different methods that use different modes of action such as inhibition of a nucleic acid via an antisense molecule (Group I), inhibition of protein function via the inhibition of its receptor (group II) and inhibition of a protein function via antibody inhibition (Group III). These methods all target different chemical compounds where the inhibitors of one group will not function in the other methods by the same mode, for example.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 1635

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
